BHU POST GRADUATE ENTRANCE TEST BOTANY BOOKS LIST

🕒 September 10, 2020 👤 petbotany

Standard books are important because they are written from the ground up and they form the foundation of your knowledge. Once you read standard books, reading coaching notes (Modules) not only becomes much easier, but you can also see where in that big picture does a small topic fit in. The problem with reading just the coaching notes is that they fail to give you such a big picture perspective. What you will be left with are fragmented concepts and broken knowledge which doesn't stick for long in your memory. For long term memory, we need a topic's context which is why you should always start with standard books. While reading coaching notes, remember these:

Coaching notes (Modules) are helpful and easy to revise before the exam. But they can only supplement but never substitute standard books.

Always map your notes onto the chapters and topics in syllabus. Most coaching institutes do not cover the syllabus entirely. Even if they do, they usually rush through some chapters. So when you see a topic not covered well in your notes, read on your own from other sources and make notes.

You have to remember that BHU PET is not at all like a graduation exam. In college, it's fairly easy to read just the notes and score really well. But in BHU PET, the questions are of standard and of analytical depth. So Regular mock tests very useful for preparation, Most of the questions usually come directly from three-four books – e.g. A textbook of Botany Singh-Pandey-Jain, GRB objective botany, Modern Botany – Dr. M.P. Kaushik, Ecology & Environment P.D. Sharma etc. It's your clarity of concepts and MCQs Practice skills that will help you scoring good.
